After a 13-year hiatus, we are pleased to announce the relaunch of Therapeutics, Pharmacology and Clinical Toxicology under the auspices of the Romanian Society of Pharmacology. This marks a significant moment for our scientific community, reaffirming our commitment to advancing research in pharmacology, clinical toxicology, and therapeutics. As the newly appointed Editor-in-Chief, I am honoured to lead this new chapter and to invite researchers, clinicians, and healthcare professionals to contribute to the revitalization of our journal.

Since its inception, Therapeutics, Pharmacology and Clinical Toxicology has been a platform for high-quality research and scholarly discussion. At first, a Romanian scientific journal that published in Romanian, it evolved over the years into an international journal that has published groundbreaking studies, fostering dialogue between academia and clinical practice. However, due to various circumstances, the journal temporarily ceased publication. Despite this interruption, the scientific landscape has continued to evolve, and the need for a dedicated, high-standard journal in our field remains as pressing as ever.

The revival of Therapeutics, Pharmacology and Clinical Toxicology under the endorsement of the Romanian Society of Pharmacology (RSPH) reinforces our journal's credibility and academic impact. The pharmacologists' society also had a period of interruption of activity and its resumption brought together new generations of pharmacologists. The RSPH will become a driving force behind the promotion of pharmacological research and clinical advancements in Romania, supporting both doctoral researchers and young academia members. Furthermore, its international affiliations with esteemed

pharmacology organizations like International Union of Basic and Clinical Pharmacology (IUPHAR) and the European Association of Clinical Pharmacology & Therapeutics (EACPT) strengthen RSPH and the journal's position in the global scientific community. This endorsement not only ensures the highest quality of publications but also provides authors with greater visibility and opportunities for international collaboration.

With this relaunch, our mission is clear: to provide an authoritative source of knowledge in pharmacology and toxicology while adhering to the highest standards of academic integrity and scientific rigor. The journal will embrace innovative research, from basic pharmacological studies to applied clinical toxicology and therapeutic advancements. We aim to support a broad spectrum of contributions, including original research articles, reviews, case reports, and expert opinions that will enrich the global scientific discourse.

The success of Therapeutics, Pharmacology and Clinical Toxicology depends on the active participation of the scientific and medical communities. We encourage researchers, clinicians, and industry professionals to submit their work, engage in peer review, and contribute to the exchange of knowledge. Interdisciplinary collaboration will be at the heart of our journal, as we seek to bridge gaps between laboratory research and clinical applications. We are also committed to nurturing young scientists by providing a reputable platform to publish their research.

The relaunch of Therapeutics, Pharmacology and Clinical Toxicology is more than a revival; it is a reinvention aimed at addressing contemporary challenges in pharmacology. As we prepare to release our first issue, we invite submissions that

reflect the latest developments and critical discussions in the field.

We believe that together, we can create a journal that serves as a cornerstone for innovation, education, and clinical advancement. We look forward to your contributions and to shaping the future of pharmacological sciences—one publication at a time.
